# Probability (Application of $P_n$ )

A bag contains 3 Red and 2 Blue Balls.

→ 2 Balls at random ✓

→ Prob. that all of these are RED.

Solution.

(3R) and (2B)

$$P = \frac{\text{\# of way of picking 2 Red Balls.}}{\text{\# Total \# of way of picking any 2 Balls.}}$$

$$\text{Total Balls} = 3 + 2 = 5$$

${}^5C_2 \rightarrow$  Total ways of selecting 2 Balls

Out of 3 Red Balls.

${}^3C_2 \rightarrow$  # of ways picking 2 Red Balls

$$P = \frac{{}^3C_2}{{}^5C_2} = \frac{\frac{3 \times 2}{\cancel{2 \times 1}}}{\frac{5 \times \cancel{4} \times 2}{\cancel{2 \times 1}}} = \frac{3}{10}$$

Prob. of  
Picking 2 red Balls

5 Balls.

$$P(\underbrace{1R}_3 \underbrace{4B}_2) = \frac{{}^3C_1 \times {}^2C_1}{{}^5C_2}$$
$$= \frac{(3 \times 2/1)}{(5 \times 4 / 2 \times 1)} = \frac{3 \times 2 \times 2}{5 \times 4} = (3/5)$$

$B_1 \quad B_2 \quad B_3 \rightarrow 3 \text{ Balls}$

Select 2 Balls

$$= {}^3C_2$$

$$= \frac{3 \times 2}{2 \times 1} = 3$$

$$\Rightarrow {}^3C_2 = \frac{{}^3P_2}{2!} =$$
